

An AAHA Accredited Veterinary Hospital

## STANDARD FELINE NEUTER FEES

### Pre-anesthetic Bloodwork (under 6 years) \$69.95 ( )

Pre-anesthetic bloodwork allows our doctors to “take a look” inside your pet before surgery is begun. Depending on the age of your pet, different protocols are followed. Pre-anesthetic bloodwork checks liver and kidney enzymes, glucose and protein levels, complete blood count, and platelet count. Patients over 6 years old will receive more comprehensive bloodwork.

\*\* (6 years and older) \$120.95 ( )

### Anesthesia \$60.00

A very safe sedative is given via intramuscular injection just prior to surgery. This sedative completely anesthetizes the cat. We are also able to reverse this particular sedative, to help your cat wake up quickly and safely from anesthesia.

### Feline Neuter \$25.00

A feline neuter is surgical castration of the male cat. The testicles are removed, therefore preventing reproduction.

### Antibiotic Injection \$35.00

Antibiotics serve to prevent post-operative infection. We give cats an injection of Convenia, an extended—release antibiotic injection. Convenia is “convenient” in that you will not have to give a tablet or liquid medication by mouth to your cat!

\*price may increase for cats over 10 pounds

## Neuter the PetStar Way!

A feline neuter is surgical castration of the male cat. The testicles are removed, therefore preventing reproduction. It can help with behavior modification, although this may not always be the case!

We want to keep your cat as safe and comfortable as possible during and after the surgical experience. Allow us to give you and your pet the “star” treatment!

### Surgical Monitoring \$10.00

Your pet is connected to an ECG machine to monitor heart rate and rhythm throughout surgery. A pulse oximeter also monitors blood oxygen saturation. A technician also closely monitors your pet throughout surgery and in recovery.

### Standard Neuter Total \$199.95

\*\* (6 years and older) \$120.95, Total: \$250.95

## OPTIONAL SERVICES (check if yes)

### Laser Surgery \$50.00 ( )

The use of the CO2 laser has been proven to reduce post-operative pain and healing time for your pet. It also helps reduce the amount of blood lost during the surgical procedure as well.

\*included in declaw price

### Pain Injection \$25.00 ( )

A pain injection will help ease pain after surgery. Our pain injections are classified as NSAIDs (non-steroidal anti-inflammatory drug). These drugs are safe for surgical patients.

\*Not an option for declaws

### Declaw with Laser \$157.00 ( )

The declaw is the permanent surgical removal of the cat’s nails. In this surgery, a laser rather than a scalpel blade is used to disarticulate the third toe bone. Advantages of laser surgery include virtually no bleeding (during surgery or afterwards), less post-operative pain, and in many cases, no bandages.

\*price includes extra anesthesia time

### Yesterday’s News (for declaws) \$8.00 ( )

Yesterday’s News is a cat litter that is safe for use after surgery,

### 1 night boarding pre- OR post-surgery Free ( )

Let us pamper your pet and provide a calm, quiet, and comfortable environment either the night before surgery or the night following surgery.

\*required for declaws

### E-Collar \$10-20.00 ( )

An e-collar will prevent your cat from chewing at sutures and/or licking the incision site. If you believe your cat is likely to exhibit these behaviors, you may want us to send an e-collar home with you. We will be more than happy to fit your pet with the appropriate size e-collar, and show you how to put it on your cat if needed.

### Home Again Microchip \$50.00 ( )

A Home Again Microchip is the best way to provide permanent identification for your pet. The chip is inserted via syringe, and each chip has its own unique number to identify your pet. If your pet ever wanders off and is taken to either a shelter or veterinary clinic, your pet’s number will show up on the microchip scanner and we can much more easily get your pet back home again.

### At-Home Pain Management \$15.00 – 40.00 ( )

If you would like to keep your pet pain-free for a few days following surgery, we can send home a pain medication. \*Not an option for declaws
